May 3, 2016

Recientemente la reconocida revista **TIME** elaboró un estudio para determinar cuales han sido los 50 más influyentes dispositivos de todos los tiempo, y hemos recorrido la lista verificando los que tienen que ver con la movilidad (portabilidad + conectividad = movilidad) encontrando íconos de la historia como las gafas de

Google Glass

(No. 50), algunos drones como el

D

JI Phantom

(No. 46), elementos de domótica como el Termostato

Nest

(No.44), algunos de los primeros computadores portátiles como el

Osborne

1 (No.43) y productos más recientes como el

Fitbit

(No.42) de los wearables.

1. Apple iPhone

Apple was the first company to put a truly powerful computer in the pockets of millions when it launched the iPhone in 2007. Smartphones had technically existed for years, but none came together as accessibly and beautifully as the iPhone. Apple's device ushered in a new era of flat, touchscreen phones with buttons that appeared on screen as you needed them, replacing the chunkier phones with slide-out keyboards and static buttons. What really made the iPhone so remarkable, however, was its software and mobile app store, introduced later. The iPhone popularized the mobile app, forever changing how we communicate, play games, shop, work, and complete many everyday tasks.

Apple's iPhone was the first smartphone to use a multi-touch interface, which allowed users to interact with the device using gestures like tapping, swiping, and pinching. This was a significant departure from the traditional single-touch interface of earlier smartphones, which often required the use of a stylus or a small trackball. The iPhone's multi-touch interface was a key factor in its success, as it made the device more intuitive and easier to use. The iPhone also introduced the concept of a mobile app store, which allowed users to download and install a wide variety of applications, from games to productivity tools. This was a significant departure from the traditional model of software distribution, which often required users to purchase software from a physical store or download it from a website. The iPhone's app store was a key factor in its success, as it provided a convenient and secure way for users to discover and download new applications. The iPhone's success led to the development of other smartphones, and it remains one of the most popular and influential devices in the history of mobile computing.

The screenshot shows a digital version of a TIME magazine article. At the top left is the TIME logo. The main title is "The 50 Most Influential Gadgets of All Time" under the "TECH GADGETS" category. Below the title is a list of authors and their social media handles, along with a date of May 3, 2016. The article's sub-headline is "The tech that forever changed the way we live, work, and play". The main text begins with "Think of the gear you can't live without: The smartphone you can't startily check. The camera that goes with you on every vacation. The TV that serves as a portal to his go-watching and -gaming. Each owes its influence to one model that changed the course of technology for good." It then lists the gadgets in this list and provides a brief description of each. The first gadget listed is "50. Google Glass", which is accompanied by a photograph of the device. The photo is credited to John Minchillo-AP. There is also a sidebar on the left with various article teasers, and a "jetBlue" advertisement for a \$69 fare.
